MECHANISMS OF EDUCATIONAL STUDY OF STUDENTS ON THE BASIS OF MODERN PEDAGOGICAL TECHNOLOGIES

Tangirov Eldor Sayfullayevich
Samarkand State Medical University

Abstract
The article analyzes the modern educational technologies applied in the learning process, composite activity and to the creative development of the student: technology contextual learning, project-based learning technology, interactive technology (discussions, debates, moderation), technology education workshops, technology training of students with signs of giftedness. Justified the use of these technologies in vocational training of bachelors in the development of student-centered education.

Keywords: personality-oriented education; modern educational technology; composite activities; self-actualization; self-realization.

Relevance

Radical reform of the education system in the Republic of Uzbekistan has been in the center of attention since the first days of independence as one of the most important tasks. The United Nations, UNICEF, UNESCO say that the annual expenditures on the development and reform of education in our country make up 10-12% of GDP and the share of this sector in the state budget is more than 35%, which is rare in other countries. and the fact that it is recognized by other authoritative international organizations can be a shining proof of our opinion.

Purpose

To inculcate the concepts of religious tolerance in the minds of students on the basis of modern educational technologies.

Materials and Methods

Today, the most important task of every educator, in the words of the head of state, is to bring up a comprehensively healthy generation that is independent-minded, well-versed in modern science and professions, dedicated to their country and people, able to continue the work started by our President. . Fulfillment of these tasks and responsibilities requires every educator to have a high level of knowledge, great skills, knowledge of the achievements of modern science, thorough knowledge of foreign languages, computer technology, targeted use of the Internet and high qualifications. One of the most important and urgent tasks facing the system of continuing education is the widespread use of innovative educational technologies in teaching, their application in the educational process and the training of knowledgeable, resourceful, enterprising, business-minded and competitive professionals. formation.

It is important to cultivate religious national tolerance in the hearts and minds of students, focused on student activities on the basis of modern educational technology, which encourages students to work effectively in a wide range of social relations. At the same time, in the course of the lesson, the student is aimed at instilling in the minds of young people a sense of religious tolerance on the basis of modern technologies.

The central problem of educational technology is to ensure the achievement of educational goals through the development of the learner's personality.

Although the theory of pedagogical technology has been based since the second half of the last century, there are different approaches to the concept of "pedagogical technology".

In particular, the pedagogical scientist V. P. Bespalko describes pedagogical technology as "a project of a specific pedagogical system that can be applied in practice" and focuses on the preliminary design of the educational process. In essence, pedagogical technology is a system in which the tasks of all stages and parts of the pedagogical process are programmed in accordance with the distribution of time, scientifically based and ensure the achievement of the expected result.

In order to increase the effectiveness of education, the student must be well-prepared for educational institutions to ensure the full development of religious tolerance and knowledge, to ensure that the individual is the focus of education and independent learning, and to know modern pedagogical technologies and interactive methods. and the introduction of pedagogical technologies that can be used in the organization of educational activities.

To do this, it is necessary to equip all science teachers with innovative pedagogical technologies and interactive methods, as well as to improve their skills in applying their knowledge in educational activities. In accordance with the state and social order of the system of continuing education, higher education institutions are creative, socially active, highly spiritual, professional, loyal to the motherland, national and universal by increasing the efficiency of the educational process, the implementation of the latest achievements of science. The development of a harmoniously developed person who is educated in the spirit of values, able to think creatively and independently, who feels his duty and responsibility to the state and society, to inculcate in their minds and hearts the idea of national independence. Successful solution of these tasks requires the use of modern pedagogical technologies in the educational process.

In the process of educational work, it is important to teach students the concepts of national and universal values and religious tolerance, creative thinking, changing situations, the organization of activities on the basis of free competition and their use of information technology, electronic textbooks and multimedia in practice. This requires students to be independent, to cultivate free thinking, to analyze academic performance, and in the future to acquire professional skills that will become their inner need. Modern pedagogical technologies are a set of new forms, methods and tools of the educational process based on a system of scientific, theoretical and methodological. At the same time, the integration of new content, form, methods and tools ensures the integrity of goals, objectives, activities and pedagogical results, and the design and implementation of the educational process, which guarantees the achievement of educational goals. The technological approach is first and foremost expressed

in a practical demonstrative structure that allows the implementation of the projected results, rather than a description. Nowadays, the interest in increasing the effectiveness of education using interactive methods (innovative pedagogical and information technologies) in the educational process is growing day by day. Classes using modern technologies provided students with the knowledge they acquired.

Conclusion

In order to solve the problems facing the education system in the current innovative processes, we need people who are able to assimilate new information and independently assess the acquired knowledge, make the necessary decisions, think independently and freely. Therefore, the role and importance of modern teaching methods - interactive methods, innovative technologies in the educational process of educational institutions is incomparable. That is why today the role and importance of professional skills, life experience, modern teaching methods-interactive methods, innovative technologies in the educational process of all educational institutions is incomparable.
