ABSTRACT

This article aims to clarify in what sense there is awareness about using new technologies, their activities and their applications in language classrooms. The methods are discussed and compared with each other in order to reach a general opinion. This article focused on the effects of using techniques applied during English lessons in high methodology style.

Keywords: The audio-lingual, communicative approach, task-based approach, large-scale production, evaluation criteria, overarching project, enable students' communication, smartphones enhance.

Introduction

New Approaches to Teaching English: Give the People What They Want! Ever get tired of seeing the same old teaching routines? I can still remember my old high school English lessons. Every day our teacher served up the same menu: Memorizing verbs, answering worksheets, taking dictation and repeating, repeating, repeating. But there's one problem. That was 25 years ago! The prevalence of social media and the internet as a whole have changed the way people learn languages—for the better. It's imperative for modern language teachers to address the needs and interests of today's students.

New Methods of Teaching English in the Modern Classroom While traditional methodologies such as the audio-lingual and direct methods still offer useful elements, they're clearly outdated in the modern classroom. The communicative approach, which was in vogue in the late '90s, is still widely considered as the latest advancement in modern language teaching. Most TESOL/TEFL training programs still live and swear by it. However, it has become clearly evident that the needs of modern students have outpaced teachers' and book publishers' best strategies. The article will take a closer look at four teaching strategy that are grand slam with students.

1. Task-based Approach

Traditional curriculum design and class planning revolved around the topics considered useful for students. This meant students were to learn the grammar and vocabulary that educators thought students needed to know. Student input was minimal to say the least.

What we learned from this is why it's imperative to build lesson plans around activities that all students can feel comfortable with and relate to. The task-based approach represents a significant paradigm shift since the focus on content has shifted to skills and competencies. So, planning and design aren't about what's taught, but why it's taught.

This approach isolates individual skills and competencies in order to teach material students actually need to know to meet their goals and objectives. Sample tasks could be ordering in a restaurant, booking a hotel room, or perhaps more advanced tasks like critiquing a movie or voicing their opinions about politics. In this approach, the language taught revolves around the task itself, not the other way around. For this method to work, teachers must understand their students' needs and expectations in order to design lessons that help their students succeed. Grammar, vocabulary and language skills are just the vehicles that enable students to achieve their final outcomes. Before adopting the task-based approach, educators must ask themselves, "Why are my students learning English?" Educators must then look at ways to help their learners achieve their personal and/or professional goals. The answers to these questions will help create a program that's relevant to your students.

2. Project-based Approach

Much like the task-based approach, the project-based approach is meant to address students' real needs by adapting language to the skills and competencies they truly need personally and/or professionally. The application of this approach begins by determining the one, global objective that the individual or group of students have. For example, if you're teaching a business English class, you should look at why students are in the class to begin with and plan accordingly. One time when working for a corporate client, I taught a room full of accountants who were all vying for promotions up for grabs in their company.

Naturally, I taught them differently than I would students interested in learning casual English conversations because of the nature of their jobs. They had to produce specific monthly reports in English for multiple departments in their office. So, we broke one sample report into sections and analyzed each segment. Each student prepared the sections as if they were the real thing. In class, discussed the difficulties my students encountered, in addition to covering all the vocabulary and grammar needed to complete each section. Their final project was a finished report they could submit to their boss for approval, and the criteria we used to create the report was based their company handbook. It was a lot of work, but we had fun with it.

But what if you have a class full of teenagers who don't want to be in class to begin with? Start by doing a needs assessment, looking at what they're interested in and what topics they really need to know. This assessment will lead to the design of one overarching project that will become the end result of the class, term or course. This project can be anything from an oral presentation to a large-scale production such as a class play. Whatever the case, the project must be comprised of individual tasks that lead students to the goals in the assessment. Think of the project as their final, comprehensive assessment. Whereas small tests or the completion of individual tasks are cumulative assessments. Just remember, your evaluation criteria must be clear so students know what they're being graded on. Oh, and

one more thing. The project-based approach works best with a lot of relevant supplemental material like the resources found on FluentU. By adding a mixture of real-world videos, natural dialogues and relevant course content, you can revitalize your English lessons and give your students the learning material they need to succeed.

3. Lexical Syllabus

While the previous two approaches focus heavily on the skills and competencies that students need to develop, this approach focuses on what language students actually need to produce. In particular, the actual words that students need to understand in order to conduct specific tasks. This approach is based upon the core language that students need to know given their needs. Again, professional students need very specific vocabulary pertaining to their field. For instance, “profit” is an essential term for business students, much the same way “scalpel” is to medical students. Moreover, any other language taught outside of this core language is meant to be supplementary and intended to enable students’ communication within their respective fields. Topics such as movies and hobbies may take a back seat to things like booking a hotel or describing work experience. Nevertheless, there are common skills in all fields, such as saying your name or providing personal information. Since this approach focuses on content, tasks and homework assignments should focus on students’ true needs. Therefore, assessment should be based upon what students actually achieved. Examples of these assessments include writing an email for a job application or arranging a time for an interview.

This approach requires teachers to understand what students really need right away, focus on that, and then expand students’ horizons as their communication skills develop. The good news is that there’s quite a bit of research on this topic, leading to word lists teachers can focus on. Since these lists can be quite long, it’s good to categorize them into sections like “weather and seasons” so lessons can focus on this specific vocabulary. For beginners, 10 words would make for a great lesson. Activities can range from matching pictures and definitions to working with dialogues. An advanced twist could be to describe their favorite seasons, or even speculate about what they could do in the summer or winter. The sky truly is the limit.

4. Using Smartphones in the Classroom

Since just about everyone has some sort of internet access or data plan, banning smartphones may end up being a lost opportunity to further enhance learning experiences. Love them or hate them, smartphones are a part of modern life. Many teachers consider them to be a distraction since most students hate to part with them. Is there a common ground? Smartphones provide many useful tools for students such as dictionary, translator and grammar reference apps. Much like computers, students need to understand that their phones aren’t for play or personal use, but to be used as learning tools. A great dictionary/translator/grammar reference tool is WordReference.com mobile app, available on Apple’s App Store and the Google Play store. Aside from translations, Word Reference has a thesaurus, English dictionary and a forum where other users can comment on difficult

words or expressions. A good example of how smartphones enhance classroom learning is the scavenger hunt exercise. Here, students must go through websites to find the information they need to fill out a worksheet. Students can also use their devices to access free, online exercises that reinforce language and/or skills seen in class.

The key issue here is to be creative with the use of smartphones. Other uses for smartphones in the classroom could be polling apps, surveys or even recording, yes, recording! Students can record themselves in action, which is perfect helping them receive feedback on specific tasks and activities. Survey Monkey is another fun app to add to your English classroom. It lets you create surveys, which students can conveniently access from their phones and answer right away. This can be used as an assessment tool or as part of a portfolio of activities. For example, students could even design survey questions, fill them out, analyze results and then create a presentation of those results. One other use that I personally find appropriate for smartphones and tablets is going paperless. If there are PDF versions available for the textbooks or materials you're using, this could allow you to simplify students' lives while being environmentally friendly. Again, it's important to make sure that students use their technology for classwork and not becoming distracted by it.

Bringing It All Together While traditional approaches do provide a solid foundation for effective language teaching, it's important to understand that these techniques don't always address students' current needs. In fact, the communicative approach, still widely preached as the latest and greatest approach, is already due for a makeover of its own. Next time you're preparing for a new group of students, or want to change the way you teach your current ones, consider the following:

- The task-based approach focuses on the skills and competencies students actually need.
- The project-based approach builds on the task-based approach using specialized activities.
- The lexical syllabus provides students with the content they will need straight out of the gate.

Combine that with effective use of technology in the classroom, and you've got a winning formula no teacher can ignore.

Conclusion

New approaches can teach our pupils to learn languages by using various techniques and technologies. In my article are given 4 new approaches:

1. The Task-based approach – isolates individual skills and competencies which mean pupils should have aim in learning with the natural context. This approach teaches pupils by easy way e.g.: they can learn language by using conversations in hotels, shops and around them.
2. The Project-based approach – this approach aim pupil to exploring real-world problems and challenges e.g. if they want to learn Business English we should teach them professionally actually to get their aims.
3. Lexical syllabus – is based on vocabulary and lexical units, and two previous approaches depend on this task. If pupils have enough words for speaking they can easily develop their

knowledge and it helps them speak fluently and can get job in anywhere in the future. So these three methods able to enrich pupils' knowledge to the highest level.

4. Finally, after all three approaches pupils will think about using technologies in the classroom e.g. mobile phones able to do everything for you: e-books, dictionary, pronunciations, testing and various useful programs develop your knowledge. Bring it all together By using all approaches together, we can get effective and professional techniques in teaching language.
