**Abstract**

Modern education requires constant development and updating of educational materials. However, compiling high-quality textbooks has become a difficult task at the present stage. In this article, we will look at the main problems faced by authors and publishers, as well as possible ways to solve them.

**Keywords:** manual, textbook, education, material, method.

**Introduction**

The first problem is the rapid pace of change in education. Technologies are developing rapidly, new discoveries make some knowledge and methods obsolete. Authors of manuals have to literally run with time to be relevant and competitive. This requires not only in-depth knowledge of the subject area, but also the ability to analyze current trends and incorporate them into your work.

The second problem is related to the needs of different categories of users: students, teachers, administration. Each of them has its own characteristics, interests, and requests. When compiling a tutorial, it is necessary to take into account all these factors and create a product that will be useful and understandable to everyone. This requires a thorough analysis of the target audience and flexibility in the approach to the presentation of the material.

The article will look at a few more issues, such as standardization, accessibility, and the use of modern technologies. We will also consider possible ways to solve these problems and give advice to the authors of manuals. However, it should be noted that this is only the beginning of the discussion of this topical topic, and many aspects require further study and development.

**- Analysis of the problems of compiling textbooks at the present stage**

At the present stage, the compilation of textbooks has become an urgent and difficult task for authors and publishers. One of the main problems is the choice of up-to-date and reliable information that would meet the modern requirements of the educational process. With the advent of new technologies and the development of the Internet, information has become available to everyone, but it is not always of high quality and verified. This creates difficulties in selecting material for a particular course or subject.

Another challenge is adapting textbooks to the needs of today's students. In the context of the rapid development of society, the ways of acquiring knowledge and approaches to learning are changing. For the successful compilation of manuals, it is necessary to take into account the individual characteristics of students, their interests, preferences and level of knowledge.

It is also impossible not to note the problem of limitations in the format of printed manuals. Traditional textbooks have certain limitations in terms of the volume and type of presentation of information. In today's world, interactive learning materials that allow students to interact with information more effectively are becoming increasingly important

### **- Trends and Challenges in the Creation of Textbooks in the Modern Educational Environment**

The creation of textbooks at the present stage faces a number of trends and challenges that should be taken into account when compiling them. The first challenge is the rapid development of technology and the constant updating of knowledge in various fields. Authors of textbooks should be aware of the latest achievements and trends in order to provide relevant information for students.

The second challenge relates to the diversity of students' needs and abilities. Standard approaches to the creation of manuals may not reflect the individual characteristics of each child. It is necessary to use differentiated teaching methods to adapt the material to the needs of each student.

The third problem relates to the availability of educational materials. Often, high-quality textbooks are expensive or inaccessible to most students. Organizations and authors should strive to create more accessible or free materials so that every student has an equal opportunity to receive a quality education.

Finally, the final challenge is copyright enforcement and intellectual property protection

The current stage in the development of education poses a number of difficulties and challenges to the compilers of textbooks. One such problem is the need for a critical review of existing approaches to textbook design.

First of all, it is important to analyze the relevance and reliability of the information provided. In the context of the rapid pace of change in all spheres of life, the content of educational materials should be updated and reflect the latest scientific achievements. We must not allow the obsolescence of information and the use of outdated methods.

Another problem is related to the form of presentation of the material. Nowadays, electronic textbooks and interactive manuals are gaining more and more popularity. However, it is necessary to assess the effectiveness of such approaches and the possibility of accessibility for all categories of learners, including people with disabilities.

In addition, it is necessary to pay attention to the individual needs of students. Often, one approach or methodology may not fully satisfy the interests and abilities of all students. Therefore, it is important to develop teaching aids that would take into account different learning styles and allow you to flexibly adjust to the needs of each student

Modern methods and technologies play a huge role in the development of textbooks at the present stage. One of the main challenges faced by textbook authors is the need to adapt the content to the rapidly changing requirements of the educational system. Innovative methods and technologies make it possible to solve this problem, providing flexibility and actualization of the material.

One innovative approach is the use of interactive elements in tutorials. These can be additional materials in the form of videos, audio recordings, or interactive activities. Such elements make the learning process more interesting and effective.

Another innovative method is the personalization of the material. With the help of modern technology, it is possible to create teaching aids that are tailored to the needs of each individual student or group of students. This allows you to work more effectively with different types of learners and increases the effectiveness of training.

In addition, the use of online platforms and programs to develop tutorials makes the process of creating them more accessible and faster

Recommendations for improving the process of writing textbooks at the present stage  
Writing textbooks is a complex and responsible process that requires careful planning and analysis. In connection with the rapid development of information technologies, there are new challenges and problems that affect the process of compiling textbooks at the present stage.

## CONCLUSIONS

In order to effectively address these problems and improve the quality of training manuals, several recommendations should be considered:

1. Updating the material: One of the key aspects in the compilation of textbooks is the relevance of the information. Today's students live in a rapidly changing world where new discoveries and technologies emerge every day. When compiling textbooks, it is necessary to actively use modern and proven sources of information.
2. Taking into account the individuality of students: Each student has their own level of knowledge and learning characteristics. A variety of teaching methods should be taken into account in the preparation of textbooks and students should be given the opportunity to choose the materials that are appropriate for them.
